Summary:

7 years of active programming experience (C#) (C++) (C) (Java) (Python)

Game development using C#, Unity, and C / C++. Software Development using Java, Python. Project management using Git, Github, Sourcetree, and other online project management tools (Trello).

Collaboration across different departments using the Scrum framework.

2 Years of Linux Experience (Ubuntu) (Nvidia Jetson)

Flashed and compiled custom drivers for Nvidia's Jetson Linux Kernel for use in embedded systems. Use of SSH and Tmux to run autonomous AUV processes.

Work / Professional Experience:

AUV Programmer (C++) (Python) (ROS 2) (YOLOv8)| Summer 2025

Worked together with a team of 5 other researchers to design and program an AUV for academic use.

Personally responsible for writing all the code for the AUV's 3 different subsystems. Responsible for data collection and training of a custom vision model using YOLOv8.

Academic History:

Technical School:

Sno Isle TECH Skills Center Everett, WA

Department: Video Game Design

University (2023 - Present):

Montana State University Bozeman, MT

Degree Sought: (B.S.) Computer Science

Notable Classes:

Data Structures and Algorithms: Linked Lists, Stacks, Queues, Trees, Hashing, Sorting Algorithms.

Discrete Structures: Graph theory, State Machines

Academic Projects:

Lead Software Engineer (C++) (Python) (ROS 2) (YOLOv8)| 2024 - Current

Lead and directed a team of 4 other software engineers to program an Autonomous Underwater Vehicle (AUV) as a part of my university's AUV program.
